NAME

   arm2hpdl − Add HP download header/trailer to an ARM ELF binary.

SYNOPSIS

   arm2hpdl [*options*] arm-binary.img > hpdl.dl

DESCRIPTION

   arm2hpdl adds an HP download header/trailer to an ARM ELF binary. If the file already has an HP
   header, just copy it to stdout.

COMMAND LINE OPTIONS

   These are the options that can appear on the command line.

    −D *level*
      Set Debug level [0].

EXAMPLES

   Add an HPDL header to a HP LaserJet 1005.

   `$ arm2hpdl sihp1005.img > sihp1005.dl`

FILES

   /usr/bin/arm2hpdl, /lib/firmware/hp/*

NAME
　　foo2hbpl2-wrapper – Convert Postscript into a ZJS printer stream

SYNOPSIS
　　foo2hbpl2-wrapper [*options*] [*ps-file*]

DESCRIPTION
　　foo2hbpl2-wrapper is a Foomatic compatible printer wrapper for the **foo2hbpl2** printer driver. This script reads a Postscript *ps-file* or standard input and converts it to Zenographics ZjStream printer format for driving the Dell 1355, Fuji Xerox DocuPrint CM205, and Xerox WorkCentre 6015 MFP printers.

　　This script can be used in a standalone fashion, but is intended to be called from a printer spooler system which uses the Foomatic printer database.

COMMAND LINE OPTIONS

　　Normal Options
　　　These are the options used to select the parameters of a print job that are usually controlled on a per job basis.

　　　–c　　Print in color (else monochrome).

　　　–C *colormode*
　　　　　Color correction mode [0].

　　　　　10　　ICM color profile (using -G *.icm file)

　　　–d *duplex*
　　　　　Duplex code to send to printer [1].

　　　　　│ 1　off │ 2　long edge │ 3　short edge

　　　–m *media*
　　　　　Media code to send to printer [1].

Media	HBPL
plain	1
bond	2
lwcard	3
lwgcard	4
labels	5
envelope	6
recycled	7
plain2	8
bond2	9
lwcard2	10
lwgcard2	11
recycled2	12

　　　–p *paper*
　　　　　Paper size code to send to printer [1].

Paper	HBPL
A4	1
B5jis	2
letter	4
executive	5
fanfold german legal	6

folio	6
legal	7
env#10	9
envMonarch	10
envC5	11
envDL	12

−n *copies*

Number of copies [1].

−r *xres***x***yres*

Set device resolution in pixels/inch [1200x600].

−s *source*

Source (Input Slot) code to send to printer [7].

1	upper	4	manual
2	lower	7	auto

−t Draft mode. Every other pixel is white.

−T *density*

Print density (1-5). The default is 3 (medium).

−2 −3 −4 −5 −6 −8 −9 −10 −12 −14 −15 −16 −18

Print in N-up. Requires the **psutils** package.

−o *orient*

Orientation used for N-up.

Portrait	-op	(normal)
Landscape	-ol	(rotated 90 degrees anticlockwise)
Seascape	-os	(rotated 90 degrees clockwise)

Printer Tweaking Options

These are the options used to customize the operation of **foo2hbpl2** for a particular printer.

−u *xoff* **x** *yoff*

Set the offset of the start of the printable region from the upper left corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−l *xoff* **x** *yoff*

Set the offset of the end of the printable region from the lower right corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−L *mask*

Send the logical clipping values from -u/-l in the ZjStream. **foo2hbpl2-wrapper** always runs Ghostscript with the ideal page dimensions, so that the scale of the image is correct, regardless whether or not the printer has unprintable regions. This option is used to move the position of the clipped image back to where it belongs on the page. The default is to send the amount which was clipped by -u and -l, and should be good in most cases.

0	don't send any logical clipping amounts
1	only send Y clipping amount
2	only send X clipping amount
3	send both X and Y clipping amounts

−P Do not send START_PLANE codes on monochrome output. May be needed by some monochrome-only printers, such as the HP LaserJet 1000.

−X *padlen*

Add extra zero padding to the end of BID segments. The default is 16 bytes. Padding 16 bytes of zeroes is needed for older ZjStream printers, such as the Minolta 2200DL and HP LaserJet 1000, and seems harmless to newer ones, such as the Minolta 2300DL. So the default should be good for all cases.

Color Tweaking Options

These are the options used to control the quality of color output. Color correction is currently a WORK IN PROGRESS.

−g *gsopts*

Additional options to pass to Ghostscript, such as -g"-dDITHERPPI=nnn", etc. This option may appear more than once.

−G *profile.icm*

Convert *profile.icm* to a Postscript color rendering dictionary (CRD) using **foo2zjs-icc2ps** and adjust the printer colors by using the Postscript **setcolorrendering** operator. (WORK IN PROGRESS).

−G *gamma-file.ps*

Prepend *gamma-file.ps* to the Postscript input to perform color correction using the **setcolortransfer** Postscript operator. For example, the file might contain:
{0.333 exp} {0.333 exp} {0.333 exp} {0.333 exp} setcolortransfer

−I *intent*

Select profile intent from the ICM file. 0=Perceptual, 1=Colorimetric, 2=Saturation, 3=Absolute. Default is 0 (perceptual).

Debugging Options

These options are used for debugging **foo2hbpl2** and its wrapper.

−S *plane*

Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

1   Cyan
2   Magenta
3   Yellow
4   Black

−D *level*

Set Debug level [0].

EXAMPLES

Create a monochrome ZjStream from a Postscript document, examine it, and then print it using a RAW print queue:

        foo2hbpl2-wrapper testpage.ps > testpage.prn
        hbpl2decode < testpage.prn
        lpr -P raw testpage.prn

Create a color ZjStream stream from a Postscript document:

        foo2hbpl2-wrapper -c testpage.ps > testpage.prn

FILES

/usr/bin/foo2hbpl2-wrapper

NAME

foo2hbpl2 – Convert Ghostscript pbmraw or bitcmyk format into a ZJS printer stream

SYNOPSIS

foo2hbpl2 [*options*] *< pbmraw-file >hbpl2-file*

foo2hbpl2 [*options*] *< bitcmyk-file >hbpl2-file*

foo2hbpl2 [*options*] *< pksmraw-file >hbpl2-file*

DESCRIPTION

foo2hbpl2 converts Ghostscript pbmraw, bitcmyk, or pksmraw output formats to monochrome or color ZJS streams, for driving the Dell 1355, Fuji Xerox DocuPrint CM205, and Xerox WorkCentre 6015 MFP printers.

COMMAND LINE OPTIONS

Normal Options

These are the options used to select the parameters of a print job that are usually controlled on a per job basis.

−c   Force color mode if autodetect doesn't work.

−d *duplex*

Duplex code to send to printer [1].

│ 1   off │ 2   long edge │ 3   short edge

−g *xpix**x**ypix*

Set page dimensions in pixels [10200x6600].

−m *media*

Media code to send to printer [1].

Media	HBPL
plain	1
bond	2
lwcard	3
lwgcard	4
labels	5
envelope	6
recycled	7
plain2	8
bond2	9
lwcard2	10
lwgcard2	11
recycled2	12

−p *paper*

Paper code to send to printer [1].

Paper	HBPL
A4	1
B5jis	2
letter	4
executive	5
fanfold german legal	6

folio	6
legal	7
env#10	9
envMonarch	10
envC5	11
envDL	12

−n *copies*
> Number of copies [1].

−r *xres***x***yres*
> Set device resolution in pixels/inch [1200x600].

−s *source*
> Source (InputSlot) code to send to printer [7].

| 1 | upper | 4 | manual |
| 2 | lower | 7 | auto |

−t   Draft mode. Every other pixel is white.

−J *filename*
> Filename string to send to printer.

−U *username*
> Username string to send to printer.

Printer Tweaking Options
These are the options used to customize the operation of **foo2hbpl2** for a particular printer.

−u *xoff* **x** *yoff*
> Set the offset of the start of the printable region from the upper left corner, in pixels [0x0].

−l *xoff* **x** *yoff*
> Set the offset of the end of the printable region from the lower right corner, in pixels [0x0].

−L *mask*
> Send logical clipping amounts implied by -u/-l in the ZjStream [3].

> 0   don't send any logical clipping amounts
> 1   only send Y clipping amount
> 2   only send X clipping amount
> 3   send both X and Y clipping amounts

−P   Do not send START_PLANE codes on monochrome output. May be needed by some black and white only printers, such as the HP LaserJet 1000.

−A   AllIsBlack: convert C=1,M=1,Y=1 to just K=1. Works with bitcmyk input only.

−B   BlackClears: K=1 forces C,M,Y to 0. Works with bitcmyk input only.

−X *padlen*
> Add extra zero padding to the end of BID segments. The default is 16 bytes. Padding 16 bytes of zeroes is needed for older ZjStream printers, such as the Minolta 2200DL and HP LaserJet 1000, and seems harmless to newer ones, such as the Minolta 2300DL. So the default should be good for all cases.

Debugging Options
These options are used for debugging **foo2hbpl2**.

−S *plane*
> Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

> 1   Cyan

    2   Magenta
    3   Yellow
    4   Black

–D *level*
       Set Debug level [0].

EXAMPLES

Create a black and white ZJS stream:

       gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
         -sPAPERSIZE=letter -r1200x600 -sDEVICE=pbmraw
         -sOutputFile=- - < testpage.ps
       | foo2hbpl2 -r1200x600 -g10200x6600 -p1 >testpage.zm

Create a color ZJS stream:

       gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
         -sPAPERSIZE=letter -g10200x6600 -r1200x600 -sDEVICE=bitcmyk
         -sOutputFile=- - < testpage.ps
       | foo2hbpl2 -r1200x600 -g10200x6600 -p1 >testpage.zc

FILES
       /usr/bin/foo2hbpl2

>
>   **−r** *xres***x***yres*
>   Set device resolution in pixels/inch [600x600].
>
>   **−s** *source*
>   Source (Input Slot) code to send to printer [0].

0	auto select		
1	tray1	2	tray2
3	multi	4	manual

−t   Draft mode. Every other pixel is white.

−2 −3 −4 −5 −6 −8 −9 −10 −12 −14 −15 −16 −18
Print in N-up. Requires the **psutils** package.

−o *orient*
Orientation used for N-up.

Portrait	-op	(normal)
Landscape	-ol	(rotated 90 degrees anticlockwise)
Seascape	-os	(rotated 90 degrees clockwise)

Printer Tweaking Options
These are the options used to customize the operation of **foo2hiperc** for a particular printer.

−u *xoff* **x** *yoff*
Set the offset of the start of the printable region from the upper left corner, in pixels [varies with paper size].

−l *xoff* **x** *yoff*
Set the offset of the end of the printable region from the lower right corner, in pixels [varies with paper size].

−L *mask*
Send the logical clipping values from -u/-l in the HIPERC stream. **foo2hiperc-wrapper** always runs Ghostscript with the ideal page dimensions, so that the scale of the image is correct, regardless whether or not the printer has unprintable regions. This option is used to move the position of the clipped image back to where it belongs on the page. The default is to send the amount which was clipped by -u and -l, and should be good in most cases.

0   don't send any logical clipping amounts
1   only send Y clipping amount
2   only send X clipping amount
3   send both X and Y clipping amounts

−Z *compressed*
Use uncompressed (0) or compressed (1) JBIG data.

Color Tweaking Options
These are the options used to control the quality of color output. Color correction is currently a WORK IN PROGRESS.

−g *gsopts*
Additional options to pass to Ghostscript, such as -g"-dDITHERPPI=nnn", etc. This option may appear more than once.

−G *profile.icm*
Convert *profile.icm* to a Postscript color rendering dictionary (CRD) using **foo2zjs-icc2ps** and adjust the printer colors by using the Postscript **setcolorrendering** operator. (WORK IN PROGRESS).

−G *gamma-file.ps*
Prepend *gamma-file.ps* to the Postscript input to perform color correction using the **setcolortransfer** Postscript operator. For example, the file might contain:
{0.333 exp} {0.333 exp} {0.333 exp} {0.333 exp} setcolortransfer

−I *intent*
Select profile intent from the ICM file. 0=Perceptual, 1=Colorimetric, 2=Saturation, 3=Absolute. Default is 0 (perceptual).

Debugging Options

These options are used for debugging **foo2hiperc** and its wrapper.

–S *plane*

Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

1   Cyan
2   Magenta
3   Yellow
4   Black

–D *level*

Set Debug level [0].

EXAMPLES

Create a monochrome HIPERC stream from a Postscript document, examine it, and then print it using nc(1) or netcat(1):

        foo2hiperc-wrapper testpage.ps > testpage.hc
        hipercdecode < testpage.hc
        nc 192.168.1.NNN 9100 < testpage.hc

Create a color HIPERC stream from a Postscript document:

        foo2hiperc-wrapper -c testpage.ps > testpage.hc

FILES

/usr/bin/foo2hiperc-wrapper

−U *username*
:   Username string to send to printer.

Printer Tweaking Options

These are the options used to customize the operation of **foo2hiperc** for a particular printer.

−u *xoff* **x** *yoff*
:   Set the offset of the start of the printable region from the upper left corner, in pixels [0x0].

−l *xoff* **x** *yoff*
:   Set the offset of the end of the printable region from the lower right corner, in pixels [0x0].

−L *mask*
:   Send logical clipping amounts implied by -u/-l in the HIPERC stream [3].

     0   don't send any logical clipping amounts
     1   only send Y clipping amount
     2   only send X clipping amount
     3   send both X and Y clipping amounts

−A   AllIsBlack: convert C=1,M=1,Y=1 to just K=1. Works with bitcmyk input only.

−B   BlackClears: K=1 forces C,M,Y to 0. Works with bitcmyk input only.

−Z *compressed*
:   Use uncompressed (0) or compressed (1) JBIG data.

Debugging Options

These options are used for debugging **foo2hiperc**.

−S *plane*
:   Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

     1   Cyan
     2   Magenta
     3   Yellow
     4   Black

−D *level*
:   Set Debug level [0].

EXAMPLES

Create a black and white HIPERC stream:

```
gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
    -sPAPERSIZE=letter -r600x600 -sDEVICE=pbmraw
    -sOutputFile=- - < testpage.ps
| foo2hiperc -r600x600 -g5100x6600 -p0 >testpage.zm
```

Create a color HIPERC stream:

```
gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
    -sPAPERSIZE=letter -g5100x6600 -r600x600 -sDEVICE=bitcmyk
    -sOutputFile=- - < testpage.ps
```

| foo2hiperc -r600x600 -g5100x6600 -p0 >testpage.zc

NAME

foo2hp – Convert Ghostscript pbmraw or bitcmyk format into a ZJS printer stream

SYNOPSIS

foo2hp [*options*] *<pbmraw-file >zjs-file*

foo2hp [*options*] *<bitcmyk-file >zjs-file*

foo2hp [*options*] *<cups-file >zjs-file*

DESCRIPTION

foo2hp converts Ghostscript pbmraw, bitcmyk, or cups output formats to monochrome or color ZJS streams, for driving the Hewlett-Packard 2600n color laser printer and other Zenographics-based printers.

COMMAND LINE OPTIONS

Normal Options

These are the options used to select the parameters of a print job that are usually controlled on a per job basis.

−b *bits* Bits per plane if autodetect doesn't work (1 or 2) [1].

−c   Force color mode if autodetect doesn't work.

−d *duplex*

Duplex code to send to printer [1].

│ 1   off │ 2   long edge │ 3   short edge

−g *xpix***x***ypix*

Set page dimensions in pixels [10200x6600].

−m *media*

Media code to send to printer [1].

Media	HPLJ 2600n
plain	1
preprinted	514
letterhead	513
transparency	2
prepunched	515
labels	265
bond	260
recycled	516
color	512
tough	276
envelope	267
light	258
heavy	262
cardstock	261
lightglossy	268
glossy	269
heavyglossy	270
cover	277
photo	278

−p *paper*

Paper code to send to printer [1].

1	letter	9	A4
5	legal	11	A5
7	executive	13	B5jis
20	env #10	27	env DL
28	env C5	34	env B5
37	env Monarch		

−n *copies*

Number of copies [1].

−r *xres**x**yres*

Set device resolution in pixels/inch [600x600].

−s *source*

Source (InputSlot) code to send to printer [7].

1	tray 2	7	auto
2	tray 1		

−t   Draft mode. Every other pixel is white.

−J *filename*

Filename string to send to printer.

−U *username*

Username string to send to printer.

Printer Tweaking Options

These are the options used to customize the operation of **foo2hp** for a particular printer.

−u *xoff**x**yoff*

Set the offset of the start of the printable region from the upper left corner, in pixels [0x0].

−l *xoff**x**yoff*

Set the offset of the end of the printable region from the lower right corner, in pixels [0x0].

−L *mask*

Send logical clipping amounts implied by -u/-l in the ZjStream [3].

0	don't send any logical clipping amounts
1	only send Y clipping amount
2	only send X clipping amount
3	send both X and Y clipping amounts

−O *c,m,y,k*

Alignment of CMYK in rows. The default is 0,0,0,0.

−P   Do not send START_PLANE codes on monochrome output. May be needed by some black and white only printers, such as the HP LaserJet 1000.

−A   AllIsBlack: convert C=1,M=1,Y=1 to just K=1. Works with bitcmyk input only.

−B   BlackClears: K=1 forces C,M,Y to 0. Works with bitcmyk input only.

−X *padlen*

Add extra zero padding to the end of BID segments. The default is 16 bytes.

Debugging Options

These options are used for debugging **foo2hp**.

−S *plane*

Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

1	Cyan
2	Magenta
3	Yellow
4	Black

−D *level*
> Set Debug level [0].

EXAMPLES
> Create a black and white ZJS stream:
>
>> gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
>>   -sPAPERSIZE=letter -r600x600 -sDEVICE=pbmraw
>>   -sOutputFile=- - < testpage.ps
>> | foo2hp -r600x600 -g5100x6600 -p1 >testpage.zm
>
> Create a color ZJS stream:
>

NAME

   foo2hp2600-wrapper – Convert Postscript into a ZJS printer stream

SYNOPSIS

   foo2hp2600-wrapper [*options*] [*ps-file*]

DESCRIPTION

   foo2hp2600-wrapper is a Foomatic compatible printer wrapper for the **foo2hp** printer driver. This script reads a Postscript *ps-file* or standard input and converts it to Zenographics ZjStream printer format for driving the Hewlett-Packard 2600n color laser printer and other Zenographics-based printers.

   This script can be used in a standalone fashion, but is intended to be called from a printer spooler system which uses the Foomatic printer database.

COMMAND LINE OPTIONS

Normal Options

   These are the options used to select the parameters of a print job that are usually controlled on a per job basis.

   −b *bits* Number of bits per plane. 1 or 2. [1].

   −c   Print in color (else monochrome).

   −d *duplex*

         Duplex code to send to printer [1].

         | 1   off | 2   long edge | 3   short edge

   −m *media*

         Media code to send to printer [1].

Media	HPLJ 2600n
plain	1
preprinted	514
letterhead	513
transparency	2
prepunched	515
labels	265
bond	260
recycled	516
color	512
tough	276
envelope	267
light	258
heavy	262
cardstock	261
lightglossy	268
glossy	269
heavyglossy	270
cover	277
photo	278

   −p *paper*

         Paper size code to send to printer [1].

1	letter	9	A4
5	legal	11	A5
7	executive	13	B5jis
20	env #10	27	env DL
28	env C5	34	env B5
37	env Monarch		

−n *copies*

      Number of copies [1].

−r *xres***x***yres*

      Set device resolution in pixels/inch [1200x600].

−s *source*

      Source (Input Slot) code to send to printer [7].

1	tray 2	4	manual/tray 1
2	tray 3	7	auto

−t   Draft mode. Every other pixel is white.

−2 −3 −4 −5 −6 −8 −9 −10 −12 −14 −15 −16 −18

      Print in N-up. Requires the **psutils** package.

−o *orient*

      Orientation used for N-up.

Portrait	-op	(normal)
Landscape	-ol	(rotated 90 degrees anticlockwise)
Seascape	-os	(rotated 90 degrees clockwise)

Printer Tweaking Options

These are the options used to customize the operation of **foo2hp** for a particular printer.

−u *xoff***x***yoff*

      Set the offset of the start of the printable region from the upper left corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−l *xoff***x***yoff*

      Set the offset of the end of the printable region from the lower right corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−L *mask*

      Send the logical clipping values from -u/-l in the ZjStream. **foo2hp2600-wrapper** always runs Ghostscript with the ideal page dimensions, so that the scale of the image is correct, regardless whether or not the printer has unprintable regions. This option is used to move the position of the clipped image back to where it belongs on the page. The default is to send the amount which was clipped by -u and -l, and should be good in most cases.

0	don't send any logical clipping amounts
1	only send Y clipping amount
2	only send X clipping amount
3	send both X and Y clipping amounts

−O *parm=val*

      Alignment of CMYK. *parm* is c, m, y, or k. *val* is in rows. Multiple options are allowed. The default is "-Oc=0 -Om=0 -Oy=0 -Ok=0".

−P   Do not send START_PLANE codes on monochrome output. May be needed by some monochrome-only printers, such as the HP LaserJet 1000.

−X *padlen*

       Add extra zero padding to the end of BID segments. The default is 16 bytes. Padding 16 bytes of zeroes is needed for older ZjStream printers, such as the Minolta 2200DL and HP LaserJet 1000, and seems harmless to newer ones, such as the Minolta 2300DL. So the default should be good for all cases.

−z *model*

       Model: Model: 0=HP CLJ 1600/2600n; 1=HP CLJ CP1215

Color Tweaking Options

These are the options used to control the quality of color output. Color correction is currently a WORK IN PROGRESS.

−g *gsopts*

       Additional options to pass to Ghostscript, such as -g"-dDITHERPPI=nnn", etc. This option may appear more than once.

−G *profile.icm*

       Convert *profile.icm* to a Postscript color rendering dictionary (CRD) using **foo2zjs-icc2ps** and adjust the printer colors by using the Postscript **setcolorrendering** operator. If *profile.icm* is none.icm, then prepare for ordering a ICM custom printer profile (i.e. from www.ICCFactory.com).

−G *gamma-file.ps*

       Prepend *gamma-file.ps* to the Postscript input to perform color correction using the **setcolortransfer** Postscript operator. For example, the file might contain:

       {0.333 exp} {0.333 exp} {0.333 exp} {0.333 exp} setcolortransfer

−I *intent*

       Select profile intent from the ICM file. 0=Perceptual, 1=Colorimetric, 2=Saturation, 3=Absolute. Default is 0 (perceptual).

Debugging Options

These options are used for debugging **foo2hp** and its wrapper.

−S *plane*

       Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

       1   Cyan
       2   Magenta
       3   Yellow
       4   Black

−D *level*

       Set Debug level [0].

EXAMPLES

Create a monochrome ZjStream from a Postscript document, examine it, and then print it using a RAW print queue:

       foo2hp2600-wrapper testpage.ps > testpage.zm
       zjsdecode < testpage.zm
       lpr -P raw testpage.zm

Create a color ZjStream stream from a Postscript document:

       foo2hp2600-wrapper -c testpage.ps > testpage.zc

FILES

      /usr/bin/foo2hp2600-wrapper

NAME

foo2lava-wrapper – Convert Postscript into a LAVAFLOW or OPL printer stream

SYNOPSIS

foo2lava-wrapper [*options*] [*ps-file*]

DESCRIPTION

foo2lava-wrapper is a Foomatic compatible printer wrapper for the **foo2lava** printer driver. This script reads a Postscript *ps-file* or standard input and converts it to Zenographics LAVAFLOW printer format for driving the Konica Minolta magicolor 1600W color laser printer, the Konica Minolta magicolor 1680MF/1690MF AIO printer, the Konica Minolta magicolor 2480/2490 MF AIO printer, the Konica Minolta magicolor 2530 DL network color laser printer, and other Zenographics-based LAVAFLOW printers.

This script can be used in a standalone fashion, but is intended to be called from a printer spooler system which uses the Foomatic printer database.

COMMAND LINE OPTIONS

Normal Options

These are the options used to select the parameters of a print job that are usually controlled on a per job basis.

−c   Print in color (else monochrome).

−C *colormode*

Color correction mode [0].

1	Photos (using m2300w CRDs)
2	Photos and text (using m2300w CRDs)
3	Graphics and text (using m2300w CRDs)
10	ICM color profile (using -G *.icm file)

−d *duplex*

Duplex code to send to printer [1].

│ 1   off │ 2   long edge │ 3   short edge

−m *media*

Media code to send to printer [0].

Media	2530DL
plain	0
transparency	4
thick stock	20
envelope	22
letterhead	23
postcard	25
labels	26
recycled	27

−p *paper*

Paper size code to send to printer [2].

−n *copies*

      Number of copies [1].

−r *xres***x***yres*

      Set device resolution in pixels/inch [1200x600].

−s *source*

      Source (Input Slot) code to send to printer [255].

1	Tray 1	255	auto
4	Tray 2		

−t   Draft mode. Every other pixel is white.

−2 −3 −4 −5 −6 −8 −9 −10 −12 −14 −15 −16 −18

      Print in N-up. Requires the **psutils** package.

−o *orient*

      Orientation used for N-up.

Portrait	-op	(normal)
Landscape	-ol	(rotated 90 degrees anticlockwise)
Seascape	-os	(rotated 90 degrees clockwise)

Printer Tweaking Options

      These are the options used to customize the operation of **foo2lava** for a particular printer.

−u *xoff***x***yoff*

      Set the offset of the start of the printable region from the upper left corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−l *xoff***x***yoff*

      Set the offset of the end of the printable region from the lower right corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−L *mask*

      Send the logical clipping values from -u/-l in the LAVAFLOW stream. **foo2lava-wrapper** always runs Ghostscript with the ideal page dimensions, so that the scale of the image is correct, regardless whether or not the printer has unprintable regions. This option is used to move the position of the clipped image back to where it belongs on the page. The default is to send the amount which was clipped by -u and -l, and should be good in most cases.

0	don't send any logical clipping amounts
1	only send Y clipping amount
2	only send X clipping amount
3	send both X and Y clipping amounts

−z *model*

      Model. The default is [0].

model	protocol	Description
0	LAVAFLOW	magicolor 2490 MF

0	LAVAFLOW	magicolor 2530 DL
1	OPL	magicolor 2480 MF
2	LAVAFLOW	magicolor 1600W
2	LAVAFLOW	magicolor 1680MF
2	LAVAFLOW	magicolor 1690MF

Color Tweaking Options

These are the options used to control the quality of color output. Color correction is currently a WORK IN PROGRESS.

−g *gsopts*
> Additional options to pass to Ghostscript, such as -g"-dDITHERPPI=nnn", etc. This option may appear more than once.

−G *profile.icm*
> Convert *profile.icm* to a Postscript color rendering dictionary (CRD) using **foo2zjs-icc2ps** and adjust the printer colors by using the Postscript **setcolorrendering** operator. (WORK IN PROGRESS).

−G *gamma-file.ps*
> Prepend *gamma-file.ps* to the Postscript input to perform color correction using the **setcolortransfer** Postscript operator. For example, the file might contain:
> {0.333 exp} {0.333 exp} {0.333 exp} {0.333 exp} setcolortransfer

−I *intent*
> Select profile intent from the ICM file. 0=Perceptual, 1=Colorimetric, 2=Saturation, 3=Absolute. Default is 0 (perceptual).

Debugging Options

These options are used for debugging **foo2lava** and its wrapper.

−S *plane*
> Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.
>
> | 1 | Cyan |
> |---|------|
> | 2 | Magenta |
> | 3 | Yellow |
> | 4 | Black |

−D *level*
> Set Debug level [0].

EXAMPLES

Create a monochrome LAVAFLOW stream from a Postscript document, examine it, and then print it using a RAW print queue:

    foo2lava-wrapper testpage.ps > testpage.zm
    lavadecode < testpage.zm
    lpr -P raw testpage.zm

Create a color LAVAFLOW stream from a Postscript document:

    foo2lava-wrapper -c testpage.ps > testpage.zc

NAME

foo2lava – Convert Ghostscript pbmraw or bitcmyk format into a LAVAFLOW or a OPL printer stream

SYNOPSIS

foo2lava [*options*] *< pbmraw-file >lava-file*

foo2lava [*options*] *<bitcmyk-file >lava-file*

foo2lava [*options*] *< pksmraw-file >lava-file*

DESCRIPTION

foo2lava converts Ghostscript pbmraw, bitcmyk, or pksmraw output formats to monochrome or color LAVAFLOW or OPL streams, for driving the Konica Minolta magicolor 2530 DL network color laser printer, the Konica Minolta magicolor 2480/2480 MF AIO printer, and other Zenographics-based LAVAFLOW printers.

COMMAND LINE OPTIONS

Normal Options

These are the options used to select the parameters of a print job that are usually controlled on a per job basis.

−c　　　Force color mode if autodetect doesn't work.

−d *duplex*
　　　　　Duplex code to send to printer [1].

　　　　　│ 1　　off │ 2　　long edge │ 3　　short edge

−g *xpix***x***ypix*
　　　　　Set page dimensions in pixels [10200x6600].

−m *media*
　　　　　Media code to send to printer [0].

Media	2530DL
plain	0
transparency	4
thick stock	20
envelope	22
letterhead	23
postcard	25
labels	26
recycled	27

−p *paper*
　　　　　Paper code to send to printer [2].

1	executive	25	A5
2	letter	26	A4
3	legal	45	B5jis
80	env Monarch	65	B5iso
81	env #10	90	env DL
91	env C5	92	env C6
835	4x6" photo	837	10x15cm photo

−n *copies*
>   Number of copies [1].

−r *xres***x***yres*
>   Set device resolution in pixels/inch [1200x600].

−s *source*
>   Source (InputSlot) code to send to printer [255].

> | | | | |
> |---|---|---|---|
> | 1 | Tray 1 | 255 | auto |
> | 4 | Tray 2 | | |

−t   Draft mode. Every other pixel is white.

−J *filename*
>   Filename string to send to printer.

−U *username*
>   Username string to send to printer.

Printer Tweaking Options
These are the options used to customize the operation of **foo2lava** for a particular printer.

−u *xoff***x***yoff*
>   Set the offset of the start of the printable region from the upper left corner, in pixels [0x0].

−l *xoff***x***yoff*
>   Set the offset of the end of the printable region from the lower right corner, in pixels [0x0].

−L *mask*
>   Send logical clipping amounts implied by -u/-l in the LAVAFLOW stream [3].

> | | |
> |---|---|
> | 0 | don't send any logical clipping amounts |
> | 1 | only send Y clipping amount |
> | 2 | only send X clipping amount |
> | 3 | send both X and Y clipping amounts |

−A   AllIsBlack: convert C=1,M=1,Y=1 to just K=1. Works with bitcmyk input only.

−B   BlackClears: K=1 forces C,M,Y to 0. Works with bitcmyk input only.

−z *model*
>   Model. The default is [0].

> | model | protocol | Description |
> |---|---|---|
> | 0 | LAVAFLOW | magicolor 2490 MF |
> | 0 | LAVAFLOW | magicolor 2530 DL |
> | 1 | OPL | magicolor 2480 MF |
> | 2 | LAVAFLOW | magicolor 1600W |
> | 2 | LAVAFLOW | magicolor 1680MF |
> | 2 | LAVAFLOW | magicolor 1690MF |

Debugging Options
These options are used for debugging **foo2lava**.

−S *plane*
>   Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

> | | |
> |---|---|
> | 1 | Cyan |
> | 2 | Magenta |
> | 3 | Yellow |
> | 4 | Black |

−D *level*
        Set Debug level [0].

EXAMPLES

Create a black and white LAVAFLOW stream:

        gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
          -sPAPERSIZE=letter -r1200x600 -sDEVICE=pbmraw
          -sOutputFile=- - < testpage.ps
        | foo2lava -r1200x600 -g10200x6600 -p1 >testpage.zm

Create a color LAVAFLOW stream:

        gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
          -sPAPERSIZE=letter -g10200x6600 -r1200x600 -sDEVICE=bitcmyk
          -sOutputFile=- - < testpage.ps
        | foo2lava -r1200x600 -g10200x6600 -p1 >testpage.zc

Printer Tweaking Options

These are the options used to customize the operation of **foo2oak** for a particular printer.

−u *xoff***x***yoff*
> Set the offset of the start of the printable region from the upper left corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−l *xoff***x***yoff*
> Set the offset of the end of the printable region from the lower right corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−L *mask*
> Send the logical clipping values from -u/-l in the OAKT stream. **foo2oak-wrapper** always runs Ghostscript with the ideal page dimensions, so that the scale of the image is correct, regardless whether or not the printer has unprintable regions. This option is used to move the position of the clipped image back to where it belongs on the page. The default is to send the amount which was clipped by -u and -l, and should be good in most cases.

> | 0 | don't send any logical clipping amounts |
> |---|--|
> | 1 | only send Y clipping amount |
> | 2 | only send X clipping amount |
> | 3 | send both X and Y clipping amounts |

−z *model*
> Model is 0 for the HP Color LaserJet 1500, and 1 for the Kyocera KM-1635/KM-2035 copiers. The default is 0.

Color Tweaking Options

These are the options used to control the quality of color output. Color correction is currently a WORK IN PROGRESS.

−g *gsopts*

Additional options to pass to Ghostscript, such as -g"-dDITHERPPI=nnn", etc. This option may appear more than once.

−G *profile.icm*

Convert *profile.icm* to a Postscript color rendering dictionary (CRD) using **foo2zjs-icc2ps** and adjust the printer colors by using the Postscript **setcolorrendering** operator. (WORK IN PROGRESS).

−G *gamma-file.ps*

Prepend *gamma-file.ps* to the Postscript input to perform color correction using the **setcolortransfer** Postscript operator. For example, the file might contain:
{0.333 exp} {0.333 exp} {0.333 exp} {0.333 exp} setcolortransfer

−I *intent*

Select profile intent from the ICM file. 0=Perceptual, 1=Colorimetric, 2=Saturation, 3=Absolute. Default is 0 (perceptual).

Debugging Options

These options are used for debugging **foo2oak** and its wrapper.

−S *plane*

Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

1   Cyan
2   Magenta
3   Yellow
4   Black

−D *level*

Set Debug level [0].

EXAMPLES

Create a monochrome OAKT stream from a Postscript document, examine it, and then print it using a RAW print queue:

    foo2oak-wrapper testpage.ps > testpage.oak
    oakdecode < testpage.oak
    lpr -P raw testpage.oak

Create a color OAKT stream from a Postscript document:

    foo2oak-wrapper -c testpage.ps > testpage.oak

−n *copies*
> Number of copies [1].

−r *xres***x***yres*
> Set device resolution in pixels/inch [600x600].

−s *source*
> Source (InputSlot) code to send to printer [7].

1	tray1	2	tray2
4	manual	7	auto

−J *filename*
> Filename string to send to printer.

−U *username*
> Username string to send to printer.

Printer Tweaking Options
These are the options used to customize the operation of **foo2oak** for a particular printer.

−u *xoff* **x** *yoff*
> Set the offset of the start of the printable region from the upper left corner, in pixels [0x0].

−l *xoff* **x** *yoff*
> Set the offset of the end of the printable region from the lower right corner, in pixels [0x0].

−L *mask*
> Send logical clipping amounts implied by -u/-l in the OAKT stream [3].

> 0   don't send any logical clipping amounts
> 1   only send Y clipping amount
> 2   only send X clipping amount
> 3   send both X and Y clipping amounts

−A   AllIsBlack: convert C=1,M=1,Y=1 to just K=1. Works with bitcmyk input only.

−B   BlackClears: K=1 forces C,M,Y to 0. Works with bitcmyk input only.

−M *mirror*
> Mirror bytes. Mirror is 0 for Kyocera KM-1635/KM-2035 and 1 for the HP Color LaserJet 1500. The default is 1.

−z *model*
> Model is 0 for the HP Color LaserJet 1500, and 1 for the Kyocera KM-1635/KM-2035 copiers. The default is 0.

Debugging Options
These options are used for debugging **foo2oak**.

−S *plane*
> Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

                    1   Cyan
                    2   Magenta
                    3   Yellow
                    4   Black

   −D *level*
            Set Debug level [0].

EXAMPLES
        Create a black and white OAKT stream:

            gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
              -sPAPERSIZE=letter -r600x600 -sDEVICE=pbmraw
              -sOutputFile=- - < testpage.ps
            | foo2oak -r600x600 -g5100x6600 -p1 >testpage.oak

        Create a color OAKT stream:

            gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
              -sPAPERSIZE=letter -g5100x6600 -r600x600 -sDEVICE=bitcmyk
              -sOutputFile=- - < testpage.ps
            | foo2oak -r600x600 -g5100x6600 -p1 >testpage.oak

FILES
        /usr/bin/foo2oak

NAME

foo2qpdl-wrapper – Convert Postscript into a QPDL printer stream

SYNOPSIS

foo2qpdl-wrapper [*options*] [*ps-file*]

DESCRIPTION

foo2qpdl-wrapper is a Foomatic compatible printer wrapper for the **foo2qpdl** printer driver. This script reads a Postscript *ps-file* or standard input and converts it to Samsung/Xerox QPDL printer format for driving the Samsung CLP-300, CLX-2160, CLX-3160, CLP-315, CLX-3175, CLP-600, CLP-610, CLP-620, CLP-360, CLP-365, and Xerox Phaser 6110 QPDL printers.

This script can be used in a standalone fashion, but is intended to be called from a printer spooler system which uses the Foomatic printer database.

COMMAND LINE OPTIONS

Normal Options

These are the options used to select the parameters of a print job that are usually controlled on a per job basis.

−c   Print in color (else monochrome).

−C *colormode*
        Color correction mode [0].

         1   CRD
        10   ICM color profile (using -G *.icm file)

−d *duplex*
        Duplex code to send to printer [1].

        │ 1   off │ 2   long edge │ 3   short edge

−m *media*
        Media code to send to printer [0].

Media	QPDL
plain	0
thick	1
thin	2
bond	3
color	4
card	5
labels	6
envelope	7
preprinted	8
cotton	9
recycled	10
transparency	11
archive	12

−p *paper*
        Paper size code to send to printer [0].

0	letter	1	legal
2	A4	3	executive
6	env #10	7	env Monarch
8	env C5	9	env DL
11	B5jis	12	B5iso
16	A5	17	A6
23	env C6	24	folio
25	env 6.75	26	env #9
28	oficio		

−n *copies*

Number of copies [1].

−r *xres***x***yres*

Set device resolution in pixels/inch [1200x600].

−s *source*

Source (Input Slot) code to send to printer [255].

1	auto	2	manual
3	multi	4	tray1

−t　　　　Draft mode. Every other pixel is white.

−2 −3 −4 −5 −6 −8 −9 −10 −12 −14 −15 −16 −18

Print in N-up. Requires the **psutils** package.

−o *orient*

Orientation used for N-up.

Portrait	-op	(normal)
Landscape	-ol	(rotated 90 degrees anticlockwise)
Seascape	-os	(rotated 90 degrees clockwise)

Printer Tweaking Options

These are the options used to customize the operation of **foo2qpdl** for a particular printer.

−u *xoff* **x** *yoff*

Set the offset of the start of the printable region from the upper left corner, in pixels [varies with paper size].

−l *xoff* **x** *yoff*

Set the offset of the end of the printable region from the lower right corner, in pixels [varies with paper size].

−L *mask*

Send the logical clipping values from -u/-l in the QPDL stream. **foo2qpdl-wrapper** always runs Ghostscript with the ideal page dimensions, so that the scale of the image is correct, regardless whether or not the printer has unprintable regions. This option is used to move the position of the clipped image back to where it belongs on the page. The default is to send the amount which was clipped by -u and -l, and should be good in most cases.

0　　　don't send any logical clipping amounts
1　　　only send Y clipping amount
2　　　only send X clipping amount
3　　　send both X and Y clipping amounts

−z *model*

Printer model. Model 0 is the default.

model	Description
0	CLP-300, CLX-2160, CLX-3160

1	CLP-600
2	CLP-310, CLP-315, CLP-610, CLX-3175
3	CLP-620, CLP-360, CLP-365

Color Tweaking Options

These are the options used to control the quality of color output. Color correction is currently a WORK IN PROGRESS.

−g *gsopts*

Additional options to pass to Ghostscript, such as -g"-dDITHERPPI=nnn", etc. This option may appear more than once.

−G *profile.icm*

Convert *profile.icm* to a Postscript color rendering dictionary (CRD) using **foo2zjs-icc2ps** and adjust the printer colors by using the Postscript **setcolorrendering** operator. (WORK IN PROGRESS).

−G *gamma-file.ps*

Prepend *gamma-file.ps* to the Postscript input to perform color correction using the **setcolortransfer** Postscript operator. For example, the file might contain:
{0.333 exp} {0.333 exp} {0.333 exp} {0.333 exp} setcolortransfer

−I *intent*

Select profile intent from the ICM file. 0=Perceptual, 1=Colorimetric, 2=Saturation, 3=Absolute. Default is 0 (perceptual).

Debugging Options

These options are used for debugging **foo2qpdl** and its wrapper.

−S *plane*

Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

1	Cyan
2	Magenta
3	Yellow
4	Black

−D *level*

Set Debug level [0].

EXAMPLES

Create a monochrome QPDL stream from a Postscript document, examine it, and then print it using a RAW print queue:

    foo2qpdl-wrapper testpage.ps > testpage.zm
    qpdldecode < testpage.zm
    lpr -P raw testpage.zm

Create a color QPDL stream from a Postscript document:

    foo2qpdl-wrapper -c testpage.ps > testpage.zc

FILES
/usr/bin/foo2qpdl-wrapper

9	legal	4	B5
8	executive	5	B5iso
10	env #10	11	env DL

−n *copies*

Number of copies [1].

−r *xres***x***yres*

Set device resolution in pixels/inch [1200x600].

−s *source*

Source (Input Slot) code to send to printer [0].

0	auto	1	cassette1

−2 −3 −4 −5 −6 −8 −9 −10 −12 −14 −15 −16 −18

Print in N-up. Requires the **psutils** package.

−o *orient*

    Orientation used for N-up.

Portrait	-op	(normal)
Landscape	-ol	(rotated 90 degrees anticlockwise)
Seascape	-os	(rotated 90 degrees clockwise)

Printer Tweaking Options

These are the options used to customize the operation of **foo2slx** for a particular printer.

−u *xoff* **x** *yoff*

    Set the offset of the start of the printable region from the upper left corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−l *xoff* **x** *yoff*

    Set the offset of the end of the printable region from the lower right corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−L *mask*

    Send the logical clipping values from -u/-l in the ZjStream. **foo2slx-wrapper** always runs Ghostscript with the ideal page dimensions, so that the scale of the image is correct, regardless whether or not the printer has unprintable regions. This option is used to move the position of the clipped image back to where it belongs on the page. The default is to send the amount which was clipped by -u and -l, and should be good in most cases.

0	don't send any logical clipping amounts
1	only send Y clipping amount
2	only send X clipping amount
3	send both X and Y clipping amounts

Color Tweaking Options

These are the options used to control the quality of color output. Color correction is currently a WORK IN PROGRESS.

−g *gsopts*

    Additional options to pass to Ghostscript, such as -g"-dDITHERPPI=nnn", etc. This option may appear more than once.

−G *profile.icm*

    Convert *profile.icm* to a Postscript color rendering dictionary (CRD) using **foo2zjs-icc2ps** and adjust the printer colors by using the Postscript **setcolorrendering** operator. (WORK IN PROGRESS).

−G *gamma-file.ps*

    Prepend *gamma-file.ps* to the Postscript input to perform color correction using the **setcolortransfer** Postscript operator. For example, the file might contain:
    {0.333 exp} {0.333 exp} {0.333 exp} {0.333 exp} setcolortransfer

−I *intent*

    Select profile intent from the ICM file. 0=Perceptual, 1=Colorimetric, 2=Saturation, 3=Absolute. Default is 0 (perceptual).

Debugging Options

These options are used for debugging **foo2slx** and its wrapper.

−S *plane*

    Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

1	Cyan

2	Magenta
3	Yellow
4	Black

–D *level*

Set Debug level [0].

EXAMPLES

Create a monochrome ZjStream from a Postscript document, examine it, and then print it using a RAW print queue:

    foo2slx-wrapper testpage.ps > testpage.zm
    slxdecode < testpage.zm
    lpr -P raw testpage.zm

Create a color ZjStream stream from a Postscript document:

    foo2slx-wrapper -c testpage.ps > testpage.zc

−p *paper*
Paper code to send to printer [6].

6	letter	2	A4
9	legal	4	B5
8	executive	5	B5iso
10	env #10	11	env DL

−n *copies*
Number of copies [1].

−r *xres***x***yres*
Set device resolution in pixels/inch [1200x600].

−s *source*
Source (InputSlot) code to send to printer [0].

│ 0   auto │ 1   cassette1

Printer Tweaking Options

These are the options used to customize the operation of **foo2slx** for a particular printer.

−u *xoff* **x** *yoff*

Set the offset of the start of the printable region from the upper left corner, in pixels [0x0].

−l *xoff* **x** *yoff*

Set the offset of the end of the printable region from the lower right corner, in pixels [0x0].

−L *mask*

Send logical clipping amounts implied by -u/-l in the ZjStream [3].

0   don't send any logical clipping amounts
1   only send Y clipping amount
2   only send X clipping amount
3   send both X and Y clipping amounts

−A   AllIsBlack: convert C=1,M=1,Y=1 to just K=1. Works with bitcmyk input only.

−B   BlackClears: K=1 forces C,M,Y to 0. Works with bitcmyk input only.

Debugging Options

These options are used for debugging **foo2slx**.

−S *plane*

Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

1   Cyan
2   Magenta
3   Yellow
4   Black

−D *level*

Set Debug level [0].

EXAMPLES

Create a black and white SLX stream:

```
gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
    -sPAPERSIZE=letter -r1200x600 -sDEVICE=pbmraw
    -sOutputFile=- - < testpage.ps
| foo2slx -r1200x600 -g10200x6600 -p1 >testpage.zm
```

Create a color SLX stream:

```
gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
    -sPAPERSIZE=letter -g10200x6600 -r1200x600 -sDEVICE=bitcmyk
    -sOutputFile=- - < testpage.ps
| foo2slx -r1200x600 -g10200x6600 -p1 >testpage.zc
```

NAME
         foo2xqx-wrapper – Convert Postscript into a XQX printer stream

SYNOPSIS
         foo2xqx-wrapper [*options*] [*ps-file*]

DESCRIPTION
         foo2xqx-wrapper is a Foomatic compatible printer wrapper for the **foo2xqx** printer driver. This script
         reads a Postscript *ps-file* or standard input and converts it to XQX printer format for driving the HP LaserJet
         P1005/P1006/P1007/P1008, the HP LaserJet P1505, the HP LaserJet P2014, the HP LaserJet M1005 MFP,
         the HP LaserJet M1120 MFP, and other XQX-based printers.

         This script can be used in a standalone fashion, but is intended to be called from a printer spooler system
         which uses the Foomatic printer database.

COMMAND LINE OPTIONS

   Normal Options
         These are the options used to select the parameters of a print job that are usually controlled on a per job
         basis.

   −d *duplex*
                 Duplex code to send to printer [1].

                 | 1   off | 2   long edge | 3   short edge

Printer Tweaking Options

These are the options used to customize the operation of **foo2xqx** for a particular printer.

−u *xoff* **x** *yoff*
> Set the offset of the start of the printable region from the upper left corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−l *xoff* **x** *yoff*
> Set the offset of the end of the printable region from the lower right corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−L *mask*
> Send the logical clipping values from -u/-l in the ZjStream. **foo2xqx-wrapper** always runs Ghostscript with the ideal page dimensions, so that the scale of the image is correct, regardless whether or not the printer has unprintable regions. This option is used to move the position of the clipped image back to where it belongs on the page. The default is to send the amount which was clipped by -u and -l, and should be good in most cases.
>
> | 0 | don't send any logical clipping amounts |
> |---|--|
> | 1 | only send Y clipping amount |
> | 2 | only send X clipping amount |
> | 3 | send both X and Y clipping amounts |

Debugging Options

These options are used for debugging **foo2xqx** and its wrapper.

−D *level*
> Set Debug level [0].

EXAMPLES

Create a monochrome ZjStream from a Postscript document, examine it, and then print it using a RAW print queue:

> foo2xqx-wrapper testpage.ps > testpage.xqx
> xqxdecode < testpage.xqx
> lpr -P raw testpage.xqx

FILES

/usr/bin/foo2xqx-wrapper

NAME

      foo2xqx – Convert Ghostscript pbmraw into a XQX printer stream

SYNOPSIS

      foo2xqx [*options*] *< pbmraw-file >xqx-file*

DESCRIPTION

      foo2xqx converts Ghostscript pbmraw to monochrome XQX streams, for driving the HP LaserJet P1005/P1006/P1007/P1008, the HP LaserJet P1505, the HP LaserJet P2014, the HP LaserJet M1005 MFP, the HP LaserJet M1120 MFP, and other XQX-based printers.

COMMAND LINE OPTIONS

    Normal Options

      These are the options used to select the parameters of a print job that are usually controlled on a per job basis.

      −d *duplex*

            Duplex code to send to printer [1].

1	off	2	long edge	3	short edge

      −g *xpix***x***ypix*

            Set page dimensions in pixels [10200x6600].

      −m *media*

            Media code to send to printer [1].

Media	M1005
standard	1
transparency	2
envelope	257
letterhead	259
thick	261
postcard	262
labels	263

      −p *paper*

            Paper code to send to printer [1].

1	letter	9	A4
5	legal	11	A5
7	executive	13	B5
20	env #10	27	env DL
28	env C5	34	env B5
37	env Monarch	257	16k 197x273
263	16k 184x260	264	16k 195x270

      −n *copies*

            Number of copies [1].

      −r *xres***x***yres*

            Set device resolution in pixels/inch [1200x600].

      −s *source*

            Source (InputSlot) code to send to printer [7].

1	upper	4	manual
2	lower	7	auto

−t   Draft mode. Every other pixel is white.

−T *density*
        Print density (1-5). The default is 3 (medium).

−J *filename*
        Filename string to send to printer.

−U *username*
        Username string to send to printer.

Printer Tweaking Options
These are the options used to customize the operation of **foo2xqx** for a particular printer.

−u *xoff* **x** *yoff*
        Set the offset of the start of the printable region from the upper left corner, in pixels [0x0].

−l *xoff* **x** *yoff*
        Set the offset of the end of the printable region from the lower right corner, in pixels [0x0].

−L *mask*
        Send logical clipping amounts implied by -u/-l in the ZjStream [3].

        0   don't send any logical clipping amounts
        1   only send Y clipping amount
        2   only send X clipping amount
        3   send both X and Y clipping amounts

−A   AllIsBlack: convert C=1,M=1,Y=1 to just K=1. Works with bitcmyk input only.

−B   BlackClears: K=1 forces C,M,Y to 0. Works with bitcmyk input only.

Debugging Options
These options are used for debugging **foo2xqx**.

−S *plane*
        Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

        1   Cyan
        2   Magenta
        3   Yellow
        4   Black

−D *level*
        Set Debug level [0].

EXAMPLES
Create a black and white XQX stream:

```
gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
    -sPAPERSIZE=letter -r1200x600 -sDEVICE=pbmraw
    -sOutputFile=- - < testpage.ps
| foo2xqx -r1200x600 -g10200x6600 -p1 >testpage.zm
```

FILES
/usr/bin/foo2xqx

NAME
>   foo2zjs-wrapper – Convert Postscript into a ZJS printer stream

SYNOPSIS
>   **foo2zjs-wrapper** [*options*] [*ps-file*]

DESCRIPTION
>   **foo2zjs-wrapper** is a Foomatic compatible printer wrapper for the **foo2zjs** printer driver. This script reads
>   a Postscript *ps-file* or standard input and converts it to Zenographics ZjStream printer format for driving the
>   Minolta/QMS 2300 DL network color laser printer and other Zenographics-based printers.
>
>   This script can be used in a standalone fashion, but is intended to be called from a printer spooler system
>   which uses the Foomatic printer database.

COMMAND LINE OPTIONS

>   **Normal Options**
>   These are the options used to select the parameters of a print job that are usually controlled on a per job
>   basis.

>   **−c**   Print in color (else monochrome).

>   **−C** *colormode*
>   Color correction mode [0].

> | | |
> |---|---|
> | 1 | Photos (using m2300w CRDs) |
> | 2 | Photos and text (using m2300w CRDs) |
> | 3 | Graphics and text (using m2300w CRDs) |
> | 10 | ICM color profile (using -G *.icm file) |

>   **−d** *duplex*
>   Duplex code to send to printer [1].

photo 10x15	na	na	na	270

−n *copies*

Number of copies [1].

−r *xres***x***yres*

Set device resolution in pixels/inch [1200x600].

−s *source*

Source (Input Slot) code to send to printer [7].

1	upper	4	manual
2	lower	7	auto

−t   Draft mode. Every other pixel is white.

−T *density*

Print density (1-5). The default is 3 (medium).

−2 −3 −4 −5 −6 −8 −9 −10 −12 −14 −15 −16 −18

Print in N-up. Requires the **psutils** package.

−o *orient*

Orientation used for N-up.

Portrait	-op	(normal)
Landscape	-ol	(rotated 90 degrees anticlockwise)
Seascape	-os	(rotated 90 degrees clockwise)

Printer Tweaking Options

These are the options used to customize the operation of **foo2zjs** for a particular printer.

−u *xoff* **x** *yoff*

Set the offset of the start of the printable region from the upper left corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−l *xoff* **x** *yoff*

Set the offset of the end of the printable region from the lower right corner, in pixels [varies with paper size]. The defaults should work on the 2200DL and 2300DL, and have not been tested on any other printers.

−L *mask*

Send the logical clipping values from -u/-l in the ZjStream. **foo2zjs-wrapper** always runs Ghostscript with the ideal page dimensions, so that the scale of the image is correct, regardless whether or not the printer has unprintable regions. This option is used to move the position of the clipped image back to where it belongs on the page. The default is to send the amount which was clipped by -u and -l, and should be good in most cases.

0   don't send any logical clipping amounts
1   only send Y clipping amount
2   only send X clipping amount
3   send both X and Y clipping amounts

−P   Do not send START_PLANE codes on monochrome output. May be needed by some monochrome-only printers, such as the HP LaserJet 1000.

−X *padlen*

Add extra zero padding to the end of BID segments. The default is 16 bytes. Padding 16 bytes of zeroes is needed for older ZjStream printers, such as the Minolta 2200DL and HP LaserJet 1000, and seems harmless to newer ones, such as the Minolta 2300DL. So the default should be good for all cases.

−z *model*

Model. Default is 0.

0   KM 2300DL / HP 1000 / HP 1005
1   HP 1018 / HP 1020 / HP 1022
2   HP Pro P1102 / P1566 / P1606dn
3   HP Pro CP1025

Color Tweaking Options

These are the options used to control the quality of color output. Color correction is currently a WORK IN PROGRESS.

−g *gsopts*

Additional options to pass to Ghostscript, such as -g"-dDITHERPPI=nnn", etc. This option may appear more than once.

−G *profile.icm*

Convert *profile.icm* to a Postscript color rendering dictionary (CRD) using **foo2zjs-icc2ps** and adjust the printer colors by using the Postscript **setcolorrendering** operator. (WORK IN PROGRESS).

−G *gamma-file.ps*

Prepend *gamma-file.ps* to the Postscript input to perform color correction using the **setcolortransfer** Postscript operator. For example, the file might contain:
{0.333 exp} {0.333 exp} {0.333 exp} {0.333 exp} setcolortransfer

−I *intent*

Select profile intent from the ICM file. 0=Perceptual, 1=Colorimetric, 2=Saturation, 3=Absolute. Default is 0 (perceptual).

Debugging Options

These options are used for debugging **foo2zjs** and its wrapper.

−S *plane*

Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

1   Cyan
2   Magenta
3   Yellow
4   Black

−D *level*

Set Debug level [0].

EXAMPLES

Create a monochrome ZjStream from a Postscript document, examine it, and then print it using a RAW print queue:

    foo2zjs-wrapper testpage.ps > testpage.zm
    zjsdecode < testpage.zm
    lpr -P raw testpage.zm

Create a color ZjStream stream from a Postscript document:

    foo2zjs-wrapper -c testpage.ps > testpage.zc

FILES

/usr/bin/foo2zjs-wrapper

NAME

foo2zjs – Convert Ghostscript pbmraw or bitcmyk format into a ZJS printer stream

SYNOPSIS

foo2zjs [*options*] *<pbmraw-file >zjs-file*

foo2zjs [*options*] *<bitcmyk-file >zjs-file*

foo2zjs [*options*] *<pksmraw-file >zjs-file*

DESCRIPTION

foo2zjs converts Ghostscript pbmraw, bitcmyk, or pksmraw output formats to monochrome or color ZJS streams, for driving the Minolta/QMS 2300 DL network color laser printer and other Zenographics-based printers.

COMMAND LINE OPTIONS

Normal Options

These are the options used to select the parameters of a print job that are usually controlled on a per job basis.

–c Force color mode if autodetect doesn't work.

–d *duplex*

Duplex code to send to printer [1].

| 1 off | 2 long edge | 3 short edge

–g *xpix***x***ypix*

Set page dimensions in pixels [10200x6600].

–m *media*

Media code to send to printer [1].

Media	2300DL HP 1005 -z0	2200DL -z0	HP 1018 HP 1020 -z1	HP P1102 HP P1606 -z2	HP CP1025 -z3

−n *copies*

Number of copies [1].

−r *xres***x***yres*

Set device resolution in pixels/inch [1200x600].

−s *source*

Source (InputSlot) code to send to printer [7].

1	upper	4	manual
2	lower	7	auto

−t   Draft mode. Every other pixel is white.

−T *density*

Print density (1-5). The default is 3 (medium).

−J *filename*

Filename string to send to printer.

−U *username*

Username string to send to printer.

Printer Tweaking Options

These are the options used to customize the operation of **foo2zjs** for a particular printer.

−u *xoff***x***yoff*

Set the offset of the start of the printable region from the upper left corner, in pixels [0x0].

−l *xoff***x***yoff*

Set the offset of the end of the printable region from the lower right corner, in pixels [0x0].

−L *mask*

> Send logical clipping amounts implied by -u/-l in the ZjStream [3].

> 0   don't send any logical clipping amounts
> 1   only send Y clipping amount
> 2   only send X clipping amount
> 3   send both X and Y clipping amounts

−P   Do not send START_PLANE codes on monochrome output. May be needed by some black and white only printers, such as the HP LaserJet 1000.

−A   AllIsBlack: convert C=1,M=1,Y=1 to just K=1. Works with bitcmyk input only.

−B   BlackClears: K=1 forces C,M,Y to 0. Works with bitcmyk input only.

−X *padlen*

> Add extra zero padding to the end of BID segments. The default is 16 bytes. Padding 16 bytes of zeroes is needed for older ZjStream printers, such as the Minolta 2200DL and HP LaserJet 1000, and seems harmless to newer ones, such as the Minolta 2300DL. So the default should be good for all cases.

−z *model*

> Model. Default is 0.

> 0   KM 2300DL / HP 1000 / HP 1005
> 1   HP 1018 / HP 1020 / HP 1022
> 2   HP Pro P1102 / P1566 / P1606dn
> 3   HP Pro CP1025

Debugging Options

> These options are used for debugging **foo2zjs**.

−S *plane*

> Output just a single color plane from a color print and print it on the black plane. The default is to output all color planes.

> 1   Cyan
> 2   Magenta
> 3   Yellow
> 4   Black

−D *level*

> Set Debug level [0].

EXAMPLES

> Create a black and white ZJS stream:

>> gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
>>   -sPAPERSIZE=letter -r1200x600 -sDEVICE=pbmraw
>>   -sOutputFile=- - < testpage.ps
>> | foo2zjs -r1200x600 -g10200x6600 -p1 >testpage.zm

> Create a color ZJS stream:

>> gs -q -dBATCH -dSAFER -dQUIET -dNOPAUSE
>>   -sPAPERSIZE=letter -g10200x6600 -r1200x600 -sDEVICE=bitcmyk
>>   -sOutputFile=- - < testpage.ps
>> | foo2zjs -r1200x600 -g10200x6600 -p1 >testpage.zc

      http://foo2zjs.rkkda.com/

NAME
gipddecode – Decode a GIPD stream into human readable form.

SYNOPSIS
gipddecode [*options*] *<gipd-file*

DESCRIPTION
gipddecode decodes a Granite Image Printer Driver (GIPD) stream into human readable form. Granite Systems was acquired by Monotype Imaging.

A GIPD stream is the printer langauge used by the Lexmark X500 and the Dell 1125 MFP printers.

COMMAND LINE OPTIONS
These are the options that can appear on the command line.

–d *basename*
> Basename of .pbm file for saving decompressed planes.

–h   Print hex file offsets.

–o   Print file offsets.

–D *level*
> Set Debug level [0].

EXAMPLES
Decode an GIPD stream file.

```
$ gipddecode -h x500-mono.prn
    0: OFST    0       len=128
   80: OFST    1       len=128
  100: OFST    2       len=128
  180: OFST    3       len=128
  200: OFST    4       len=128
       [SNIP]

NAME
>   hbpldecode – Decode a HBPL stream into human readable form.

SYNOPSIS
>   **hbpldecode** [*options*] *<hbpl-file*

DESCRIPTION
>   **hbpldecode** decodes a HBPL stream into human readable form. HBPL is Host Based Printer Language.
>
>   There are two versions of HBPL in existence.
>
>   Version one is an HBPL stream with Huffman RLE data. This data is used by the Dell 1250c, Dell
>   C1660w, Epson AcuLaser C1700, Fuji-Xerox cp105b, and similiar printers. These printers are unsup-
>   ported.
>
>   Version two is an HBPL stream with JBIG encoded data. This data is used by the Xerox WorkCentre 6015,
>   Fuji Xerox DocuPrint CM205, and the Dell 1355c. These printers are supported by foo2hbpl2-wrapper et
>   al.
>
>   Both versions can be decoded by hbpldecode.

COMMAND LINE OPTIONS
>   These are the options that can appear on the command line.
>
>   **–d** *basename*
>   Basename of .pbm file for saving decompressed planes.
>
>   **–h**   Print hex file offsets.
>
>   **–o**   Print file offsets.
>
>   **–D** *level*
>   Set Debug level [0].

EXAMPLES
>   Decode an HBPL stream file, version 1.

```
$ hbpldecode -h 1250c-mono.prn

NAME

hipercdecode – Decode a HIPERC stream into human readable form.

SYNOPSIS

hipercdecode [*options*] *<hiperc-file*

DESCRIPTION

hipercdecode decodes a HIPERC stream into human readable form. Uncompressed and JBIG formats are handled.

An HIPERC stream is the printer langauge used by the Oki Data C310dn, C3100, C3200n, C3250n, C3300n, C3400n, C5100n, C5250n, C5500n, C5600, and the C5800n printers.

COMMAND LINE OPTIONS

These are the options that can appear on the command line.

–d *basename*

Basename of .pbm file for saving decompressed planes.

–h Print hex file offsets.

–o Print file offsets.

–D *level*

Set Debug level [0].

EXAMPLES

Decode an HIPERC stream file created by foo2hiperc.

```
$ foo2hiperc-wrapper testpage.ps | hipercdecode -h
     0:      \033%-12345X@PJL

NAME
foo2zjs−icc2ps – little cms PostScript converter.

SYNOPSIS
foo2zjs−icc2ps [*options*]

DESCRIPTION
lcms is a standalone CMM engine, which deals with the color management. It implements a fast transformation between ICC profiles. **foo2zjs−icc2ps** is little cms PostScript converter.

COMMAND LINE OPTIONS

−b   Black point compensation (CRD only).

−c <0,1,2>
         Precision (0=LowRes, 1=Normal (default), 2=Hi−res) (CRD only)

−i *profile*
         Input profile: Generates Color Space Array (CSA).

−n <gridpoints>
         Alternate way to set precision, number of CLUT points (CRD only)

−o *profile*
         Output profile: Generates Color Rendering Dictionary(CRD).

−t <0,1,2,3>
         Intent (0=Perceptual, 1=Colorimetric, 2=Saturation, 3=Absolute).

−u   Do NOT generate resource name on CRD.

NAME

lavadecode – Decode a LAVAFLOW stream into human readable form.

SYNOPSIS

lavadecode [*options*] *<lavaflow-file*

DESCRIPTION

lavadecode decodes a LAVAFLOW stream into human readable form.

A LAVAFLOW stream is the printer langauge used by some Konica Minolta printers, such as the KM magicolor 2530 DL.

COMMAND LINE OPTIONS

These are the options that can appear on the command line.

–d *basename*

Basename of .pbm file for saving decompressed planes.

–h   Print hex file offsets.

–o   Print file offsets.

–D *level*

Set Debug level [0].

EXAMPLES

Decode an LAVAFLOW stream file created by foo2lava.

```
$ lavadecode -h < testpage.prn

NAME

oakdecode – Decode an OAKT printer stream into human readable form.

SYNOPSIS

oakdecode [*options*] *<OAKT-file*

DESCRIPTION

oakdecode decodes an OAKT printer stream into human readable form.

An OAKT printer stream is the printer langauge used by the HP Color LaserJet 1500 and other printers.

COMMAND LINE OPTIONS

These are the options that can appear on the command line.

–d *basename*
> Basename of .pbm file for saving decompressed planes.

–r *basename*
> Basename of .jbg file for saving raw planes

–i   Suppress display of image records.

–o   Print file offsets.

–D *level*
> Set Debug level [0].

EXAMPLES

Decode an OAKT file created by foo2oak.

```
$ oakdecode < testpage.oak

NAME

opldecode – Decode a Raster Object (opl) stream into human readable form.

SYNOPSIS

opldecode [*options*] *<zjs-file*

DESCRIPTION

opldecode decodes a Raster Object (opl) stream into human readable form.

A Raster Object stream is the printer langauge used by some Konica Minolta printers, such as the KM magicolor 2480 MF.

COMMAND LINE OPTIONS

These are the options that can appear on the command line.

–d *basename*

Basename of .pbm file for saving decompressed planes.

–h   Print hex file offsets.

–o   Print file offsets.

–D *level*

Set Debug level [0].

EXAMPLES

Decode an Raster Object stream file created by foo2lava-wrapper -z1.

```
$ foo2lava-wrapper -z1 testpage.ps | opldecode -h
    0:        Event=StartOfJob;
   11:        OSVersion=WindowsXP;
   25:        DrvVersion=2.0.1410.0;
   3b:        Resolution=1200x600;
   4f:        RasterObject.Compression=JBIG;
   6d:        Sides=OneSided;
   7c:        MediaSize=custom_size_8.5x11in;
   9b:        MediaType=plain;
   ab:        MediaInputTrayCheck=top;
   c3:        RasterObject.BitsPerPixel=1;
   df:        RasterObject.Planes=00FFFF,0,0,0,0,0,0;
  106:        RasterObject.Width=9792;
  11e:        RasterObject.Height=6400;

NAME

osx-hplj-hotplug - Daemon for downloading firmware files for Mac OS X

SYNOPSIS

osx-hplj-hotplug [*options*]

DESCRIPTION

osx-hplj-hotplug is a daemon for Mac OS X which watches for Hewlett-Packard LaserJet 1000, 1005, 1018, 1020, P1005, P1006, P1007, P1008, and P1505 being plugged in. If so, then the firmware is downloaded to it.

NOTE: this is not needed by Linux, which has a proper hotplug mechanism.

Here is a **/etc/rc.local** start:

BEGIN osx-hplj-hotplug from foo2zjs
    killall osx-hplj-hotplug
    osx-hplj-hotplug >/tmp/osx-hplj-hotplug 2>&1 &
END osx-hplj-hotplug from foo2zjs

COMMAND LINE OPTIONS

−D *level*
        Set Debug level [0].

FILES

/usr/share/foo2*/firmware/*

SEE ALSO

/etc/rc.local,

NAME
>   printer-profile – Profile using X-Rite ColorMunki and Argyll CMS

SYNOPSIS
>   **printer-profile** [*options*] manuf model [rgb|cmyk] [patches] [ink-limit]

DESCRIPTION
>   **printer-profile** prints a test chart, uses the ColorMunki instrument to scan it in, then computes an ICM profile using the Argyll Color Management System.
>
>   Manuf is "sam". Model is "clp-300", "clp-315", "clp-325" or "clp-365".
>   Manuf is "hp". Model is "2600" or "cp1215".
>   Manuf is "km". Model is "2300" or "2530".
>   Manuf is "dell". Model is "1355".
>
>   "rgb" is the usual setting. "patches" is a multiple 196 per page.
>
>   Edit the script for additional models.

OPTIONS
>   -b 1|2   Bits per pixel (1)
>   -r XRESxYRES Resolution. Default=''. ()
>   -P rem-print Remote print (64-bit) machine, or none (amd)
>   -S rem-scan   Remote scan (ColorMunki) machine, or none (mac)
>   -D lvl   Debug level

EXAMPLES
>   Profile the Samsung clp-315:
>
>    ```
>    $ printer-profile sam 315 rgb 196
>    ```

BUGS
>   gs 8.64 and before has problems with 32-bit machines and color profile data. Don't use!
>
>   You need Argyll_V1.5.1 or later.

FILES
>   **/usr/bin/printer-profile, /usr/share/foo2*/icm/testing.icm**

NAME
qpdldecode – Decode a QPDL stream into human readable form.

SYNOPSIS
qpdldecode [*options*] *<qpdl-file*

DESCRIPTION
qpdldecode decodes a QPDL stream into human readable form. Only the JBIG compression format (0x13) is handled.

An QPDL stream is the printer langauge used by the Samsung CLP-300, CLP-600, CLX-3160 and the Xerox Phaser 6110 printers.

COMMAND LINE OPTIONS
These are the options that can appear on the command line.

–d *basename*
> Basename of .pbm file for saving decompressed planes.

–h   Print hex file offsets.

–o   Print file offsets.

–D *level*
> Set Debug level [0].

EXAMPLES
Decode an QPDL stream file created by foo2qpdl.

```

NAME

slxdecode – Decode a SLX stream into human readable form.

SYNOPSIS

slxdecode [*options*] *<slx-file*

DESCRIPTION

slxdecode decodes a SLX stream into human readable form.

A SLX stream is the printer langauge used by some Lexmark printers, such as the C500.

More information on the Software Imaging K.K. SLX stream can be found at:

http://softwareimaging.com/products-services/sorcerer/index.asp

COMMAND LINE OPTIONS

These are the options that can appear on the command line.

–d *basename*

Basename of .pbm file for saving decompressed planes.

–r *basename*

Basename of .jbg file for saving raw planes

–h   Print hex file offsets.

–o   Print file offsets.

–D *level*

Set Debug level [0].

EXAMPLES

Decode an SLX file created by foo2slx.

```
$ slxdecode < testpage.zm
SLX_MAGIC, 0x584c53a5 (SLX)
SLT_START_DOC, 12 items
        SLI_PAGECOUNT, 4294967295 (0xffffffff)
        SLI_DMDUPLEX, 0 (0x0)
        SLI_DMCOLLATE, 0 (0x0)
        SLI_0x3, 0 (0x0)
        SLI_DISPLAY, 0 (0x0)
        SLI_0x5, 0 (0x0)
        SLI_0x6, 0 (0x0)
        SLI_0x7, 1 (0x1)
        SLI_0x8, 0 (0x0)
        SLI_0x9, 0 (0x0)
        SLI_COUNT, 1 (0x1)
        SLI_DMCOLLATE, 0 (0x0)
SLT_START_PAGE, 16 items [Page 1]
        SLI_DMPAPER, 6 (0x6)
        SLI_CUSTOM_X, 0 (0x0)
        SLI_CUSTOM_Y, 0 (0x0)
        SLI_DMCOPIES, 1 (0x1)

NAME

      usb_printerid – prints the ID of the printer on a USB port

SYNOPSIS

      usb_printerid [*options*] /dev/usb/lpNNN

DESCRIPTION

      usb_printerid prints the identification of the printer on a USB port using the ioctl control **LPIOC_GET_DEVICE_ID**.

EXAMPLES

      Print the USB info before and after downloading the firmware.

```
# usb_printerid /dev/usb/lp0
GET_DEVICE_ID string:
MFG:Hewlett-Packard;MDL:HP LaserJet 1020;CMD:ACL;CLS:PRINTER;\
DES:HP LaserJet 1020;

# cp /lib/firmware/hp/sihp1020.dl /dev/usb/lp0

# usb_printerid /dev/usb/lp0
GET_DEVICE_ID string:
MFG:Hewlett-Packard;MDL:HP LaserJet 1020;CMD:ACL;CLS:PRINTER;\

NAME
>   zjsdecode – Decode a ZjStream into human readable form.

SYNOPSIS
>   **zjsdecode** [*options*] <*zjs-file*

DESCRIPTION
>   **zjsdecode** decodes a ZjStream into human readable form.
>
>   A ZjStream is the printer langauge used by some Minolta/QMS and HP printers, such as the 2300DL and LJ-1000.
>
>   More information on Zenographics ZjStream can be found at:
>
>   >   http://ddk.zeno.com

COMMAND LINE OPTIONS
>   These are the options that can appear on the command line.
>
>   **–d** *basename*
>   >   Basename of .pbm file for saving decompressed planes.
>
>   **–r** *basename*
>   >   Basename of .jbg file for saving raw planes
>
>   **–h**   Print hex file offsets.
>
>   **–o**   Print file offsets.
>
>   **–p**   Don't do 4 byte padding
>
>   **–D** *level*
>   >   Set Debug level [0].

EXAMPLES
>   Decode an ZjStream file created by foo2zjs.

```
$ zjsdecode < testpage.zm
ZJT_START_DOC, 3 items
        ZJI_PAGECOUNT, 0 (0x0)
        ZJI_DMDUPLEX, 1 (0x1)
        ZJI_QUANTITY, 1 (0x1)
ZJT_START_PAGE, 17 items
        ZJI_0x17, 0 (0x0)
        ZJI_0x16, 1 (0x1)
        ZJI_VIDEO_X, 10200 (0x27d8)
        ZJI_VIDEO_Y, 6600 (0x19c8)
